Application

Surfaces

The high-solid content of System3 acrylic inks is what gives them their covering power and colour strength. As the solids will separate within the bottles over time, it is recommended to mix the inks with a spatula before use and to shake the bottles to redisperse the solids evenly once they have been mixed. If the dropper inside the bottle is blocked, simply insert a pin or paperclip into the hole whilst gently squeezing the rubber bulb to help the solids out back into the bottle.

System3 acrylic inks are multi-surface, pigment-based opaque inks

Ideal for mixed media and multi-technique applications ranging from creative projects to traditional fine art. The inks are water-based, water-resistant when dry and can be used inside as well as outdoors offering artists a fine art palette of 28 colours that match the System3 Acrylic colour range.

System3 Acrylic Ink has been engineered to adhere to a multitude of surfaces\* including paper, textile, wood, metal, plastic, ceramic, and murals with superior covering power.

\*Prepare your surface and test on a small area in advance

§ For technical reasons the printed colours do not match 100% the painted colours, but deliver the best possible reference point.
